DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 17-42 and 54 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 17, 30 cite the limitations "a tracking element disposed within said housing, said tracking element configured to track a motion of said housing in a first direction and a second direction different from the first direction". Although the specification does mention "a tracking device (see page 1, lines 12-13, page 6, lines 6-9 and 24-31). There is no support for the limitation "a tracking element disposed within said housing, said tracking element configured to track a motion of said housing in a first direction and a second direction different from the first direction".

Art Unit: 2674

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "tracking element configured to track a motion of said housing in a first direction and a second direction different from the first direction" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Salcudean et al.(U. S. Patent No. 5,790,108).

In reference to claims 17 and 30, Salcudean discloses in Fig. 6-8 an apparatus comprising: a housing 20 with an upper and lower portion having a detector (see 66 in Fig. 1) corresponding to the tracking element; coil 124 and magnet 126 corresponding to the movement

Art Unit: 2674

generator; and spring 128 and 130 corresponding to the resilient material coupled to the housing configured to deliver the tactile sensation as claimed.

In reference to claim 18-19, refer to Fig. 10-11 and column 9, lines 4-63.

In reference to claim 20, Fig. 3 shown movement generator generate the tactile sensation in the arrow directions to generate the tactile sensation over the entirely housing as claimed.

In reference to claim 22, Fig. 7 show the force is applied in the upper portion of the housing as claimed.

In reference to claims 23 and 37, Fig. 7 show the location of the two springs in between the two portion of the housing as claimed.

In reference to claims 24, 38, and 41, 46, Fig. 3-7 shows the movement generator including electromagnetic actuator as claimed.

In reference to claim 25-29 and 31-33 and 39-40, see Fig. 11-12 and associate text in col. 9, lines 4-63.

With reference to claims 35, 42, 49-51 and 54, Salcudean discloses a pair of springs 128 and 130 tend to hold the tactile element in its lower most position as illustrated i.e. closest to the core 122, however when the coil is activated the repulsion of the magnet 126 from the core 122 and the coil 124 is stronger than the tension in the springs 128 and 130 so that the tactile element moves upwardly away from the core 122 with the amount of movement being dependent on the current in the coil 124 (col. 7, lines 30-36).

In reference to claim 43, Fig. 3 shows the movement of the upward force 84 applied to the upper portion of the housing portion with respect to the bottom as claimed.

Art Unit: 2674

In reference to claims 44-45, 47-48 and 53, refer to the rejection as applied to claims 18-19.

Response to Arguments

5. Applicant's arguments with respect to claims 17-20, 22-33, 35-54 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **DUC Q DINH** whose telephone number is (703) 306-5412 The examiner can normally be reached on Mon-Fri from 8:00.AM-4:00.PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RICHARD A HJERPE can be reached on (703) 305-4709.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

Or faxed to:

(703) 872-9306 (for Technology Center 2600 only)

Hand-delivery response should be brought to: Crystal Park II, 2121 Crystal Drive, Arlington, Va Sixth Floor (Receptionist)

Art Unit: 2674
